Tiffany Hippensteal  
Campus Recruiting Representative  
Lockheed Martin Corporation

I am graduating this June with a Masters in Electrical Engineering from Stanford University. I am looking at Lockheed Martin as a place to continue my intellectual and professional progress. I have settled in to Signal Processing for my MS, but concentrated on Circuits and Devices for my BS, with many classes in computer hardware. A combination of many aspects of Electrical Engineering and Physics for a significant goal would be perfect, and many of the projects at Lockheed Martin would be just that.

My past work included field tests, post-processing, and signal generation for GPS systems at the Johns Hopkins University Applied Physics Laboratory, and I would love to continue working in a challenging, driven environment. In nine months I will have extensive depth in Electrical Engineering, along with a tremendous desire to apply my skills to create something powerful.

I would love an opportunity to learn more about specific careers and projects at Lockheed Martin, and I would certainly be available to visit any of the many locations. Do not hesitate to contact me through phone or email for any reason.
