I am graduating this June with a Masters in Electrical Engineering from Stanford University. I am looking at Qualcomm as a place to continue my intellectual and professional progress. I have settled in to Signal Processing for my MS, but concentrated on Circuits and Devices for my BS, with many classes in computer hardware. A combination of my two interests within Electrical Engineering would be perfect, and many of the projects at Qualcomm would be just that.

My past work included field tests, post-processing, and signal generation for GPS systems at the Johns Hopkins University Applied Physics Laboratory, and I would love to continue working in a challenging, cutting edge environment like Qualcomm. In nine months I will have extensive depth in Electrical Engineering, along with a tremendous desire to apply my skills to create something powerful.

I would love an opportunity to learn more about careers and projects at Qualcomm, and I would certainly be available to visit or meet with someone on campus at Stanford. Do not hesitate to contact me through phone or email for any reason.
